

**Abhishek S. Mhaiskar***Software Developer,***Amdocs Development Center,****(Full Stack Engineer)****Pune****Experience -: 2 Year+****abhishekmhaiskar@gmail.com****Summary**

Technology has always fascinated me and I try my best to Implement my knowledge into practical life and solve the problems before me. I have strong desire and willingness to learn new things and technologies.

(Agile, Angular 6-7, JavaScript, Spring MVC, Spring-Boot, Java 8,J-Unit, Swagger, MySQL, HTML5, GIT, SVN, CSS-Bootstrap)

Skills and Expertise**Full Stack Developer**

Tools: Visual Studio Code, MYSQL Workbench, Eclipse, Postman Maven, GIT, Toad, SVN.

Programming Skills: JavaScript, Java, HTML, CSS

Database Skills: MySQL, PL-SQL.

Framework: Spring, Angular, Bootstrap.

Domain: Product and Application Development

1. Self Service and Dealer Service Product for XXX Telecom Corporation.

[Role] Software Developer

Amdocs Experience :

- ✓ Planned Development of product using React- Redux for Front End.
- ✓ **Spring Boot, Java 8, Swagger, Junit, Sonar, Jacoco** for Backend Development.
- ✓ Requirement gathering, analysis and development.
- ✓ Build and deploy the product on server using Jenkins and RPM (Red hat package) Manager.

Project Description: The Developed Product is Based on the latest technology stack available in the market and it is developed according to the International Standards Defined by TM forum. It is developed using Agile Methodology and TDD approach.

I was Responsible for Developing Backend Rest Services from User Requirement using Swagger – Spring boot and Java8, unit testing and Flow testing using Junit and Postman.

The product can be used by end user or authorized dealer and distributors. After Login user/Dealer will be able to Take New connection, Plan, modify current Plan, Upgrade Decoder, Pay the Bill, Mange Channels and Plan, create Service Request, transfer connection to new Address, multiroom connection, Modify Personal info along with many more features.

**CTS Experience
(Orbit Shifter and
Full Stack Developer)**

1.Grizzly-Store (E-Commerce)

[Role] Team lead and Full Stack developer

- ✓ Developed product using, Bootstrap, CSS, Angular 5 for Front End.
- ✓ Used Spring-Boot, MySQL Work Bench for Back End.
- ✓ Requirement gathering and analysis.
- ✓ Development
- ✓ Creating and Maintaining Project Repository On (code.cognizant.com) Gitlab.

Project Description: I worked on this project during my training as full stack developer (Immersive Learning Batch) at Cognizant. It implements an E-commerce website which was divided into three portals Admin, Vendor and Customer. 21 Developers worked on this project who were divided into each respective Portal. I was part of vendor portal and my task was to display detailed product information along with images - on click from product list, Edit product Information and delete Images. We implemented this project using GIT and Maven. We deployed this project on cognizant server using putty and WinScp3 tools.

This Application allows User to login, search, view products with details and images in carousel, add them to cart, manage orders and track orders placed by them.

2. Cognizant - KLAB

[Role] Full Stack Developer

- ✓ Planned Development of product using CSS, HTML, Angular5 for Front End.
- ✓ Planned usage of Spring-Boot, MySQL Work Bench for Back End.
- ✓ Requirement gathering analysis and work allocation.
- ✓ Creating and managing GIT Repository for the Project

Project Description: The idea behind this project is utilization of Cognizant internal resources instead of external vendors or trainers for fresher or

Associates training program. It will help cognizant team to save expenditures cost on external vendors. Cognizant Employees who are willing to guide others will register on the portal, mention their specialized technology and time availability. Thus respective cognizant teams can arrange sessions for the required technology.

User is able to see event notifications, Past events along with images, Login in to CKlub portal, Register for the Event, view Event Description, Feed Back After the Event etc.

3. Compe10cy (TPL Project in Early Engagement for Campus Hires)

[Role] Full Stack Developer

- ✓ Planned Development of product using HTML(JSP), CSS, JavaScript for Front End.
- ✓ Planned usage of Servlet, JavaScript, MySQL Work Bench for Back End.
- ✓ Requirement gathering analysis and work allocation.
- ✓ Building a project and deploying it on server using Jenkins

Project Description: This was the already live project which needed some functionality patches to be added. It was the platform for cognizant aspirants from colleges all across the India to engage with cognizant organization through learning events like TPL and various technology tracks. In compe10cy portal I was responsible for creating portal for admin to publish event, start registration for event, freeze Registration booking and configure year specific users for event. Apart from compe10cy-admin portal I worked on tpl portal which was created for redirecting admin configured users to e-box learning platform. Ant tool was used for building this project. For deployment of this project on server Jenkins was used.

Using this Application user was able to Login, Register for the event , book desired slot from the available slots if user is allowed to book a slot by admin, see time remaining for the event after login , Register for the TPL season , view learning progress, Provide and update personal or qualification Details etc.

4. XXXX (Product Tracking System)

[Role] Full Stack Developer

- ✓ Planned Development of product using JSP, JavaScript, Spring MVC for Front End.
- ✓ From Data Base side – PL-SQL
- ✓ Requirement gathering, analysis and development.
- ✓ Building a project and deploying it on server using SVN repository and WinSCP3.

Project Description: AMI PTS is the product Tracking system which deals with the smart assets such as meter, Relay, Smart Node, Battery Backup unit and Access Point. This project mainly contains many tasks and schedulers which interact with the device health their readings and status along with the location. Users get notified about these devices from time to time.

I have worked on condition monitoring module Enhancements, which checks the health of these device daily and triggers the mail about the reading to user on rolling interval entered by user along with the excel sheet of devices with their id and on which condition they are failed.
